ABSTRACT

India's heritage in languages and literature is one of the richest in the world. Some of the languages that were spoken in India in ancient times and had a rich literature have become extinct, others remained important. As Sanskrit is no longer a spoken language, it is still a language of many religious rituals and of literature. In recent years, with rapid increase in popularity of English, Sanskrit is seeing a downfall, and if not provided with technological support it might one day get extinct too. It is our small attempt in bringing Sanskrit back to its tracks, by linking it with the technology. This project will prove to be beneficial for all the aspirants who are interest in learning or practicing Sanskrit. Not just that it will prove to be a great tool for Sanskrit teachers too, by helping them in verifying the text hands-on in case of doubt.
